

Create a database on your Own.

After creating the table insert a minimum of 10 data in your database

relevant to the Category / Column name as follows,

i) slno with Primary Key

ii) Name with Not Null

iii) location ,

iv) email ,

v) age

vi) Course Name

Finally the data has to be retrieved from the database.

The screenshot shows the MySQL Workbench interface. The SQL Editor contains the following SQL code:

```
1 create database anudip_java;
2 use anudip_java;
3 create table sample(
4     slno int primary key,
5     name varchar(20) not null,
6     location varchar(20),
7     email varchar(20) unique,
8     age varchar(20),
9     course_name varchar(20)
10 );
11 insert into sample(slno, name, location, email, age, course_name)
12 values(1,'vignesh','pallavaram','vicky@gmail.com','22','Core Java'),
13 (2,'santhosh','urapakan','santi@gmail.com','21','Core Python'),
14 (3,'pugal','madurai','pugal@gmail.com','21','Data Analytics'),
15 (4,'sharvesh','tambaram','shrvsh@gmail.com','21','ADPL'),
16 (5,'moshika','irumbuliyur','moshi@gmail.com','23','ADPL');
17
18 select * from sample;
```

The Results tab shows the output of the query, displaying a table with 5 rows and 6 columns: slno, name, location, email, age, and course_name.

slno	name	location	email	age	course_name
1	vignesh	pallavaram	vicky@gmail.com	22	Core Java
2	santhosh	urapakan	santi@gmail.com	21	Core Python
3	pugal	madurai	pugal@gmail.com	21	Data Analytics
4	sharvesh	tambaram	shrvsh@gmail.com	21	ADPL
5	moshika	irumbuliyur	moshi@gmail.com	23	ADPL

The Output tab shows the execution log, including the following messages:

- 17:43:22 insert into sample(slno, name, location, email, age, course_name) values(1,'vignesh','pallavaram','vicky@gmail.com','22','Core Java'), (2,'santhosh','urapakan','santi@gmail.com','21','Core Python'), (3,'pugal','madurai','pugal@gmail.com','21','Data Analytics'), (4,'sharvesh','tambaram','shrvsh@gmail.com','21','ADPL'), (5,'moshika','irumbuliyur','moshi@gmail.com','23','ADPL');
- 17:43:26 create table sample(slno int primary key, name varchar(20) not null, location varchar(20), email varchar(20) unique, age varchar(20), course_name varchar(20));
- 17:43:26 insert into sample(slno, name, location, email, age, course_name) values(1,'vignesh','pallavaram','vicky@gmail.com','22','Core Java'), (2,'santhosh','urapakan','santi@gmail.com','21','Core Python'), (3,'pugal','madurai','pugal@gmail.com','21','Data Analytics'), (4,'sharvesh','tambaram','shrvsh@gmail.com','21','ADPL'), (5,'moshika','irumbuliyur','moshi@gmail.com','23','ADPL');
- 17:43:26 select * from sample;
