

Question 1:

Write a Java Program to find the vowels, Consonants and the Special Characters in a Sentence.

Example:

Input - #@!Hi, My name is (your Name)

Output:

Vowels: xxx

Consonants: xxx

Special Characters : xxx

Page 1

The screenshot shows an IDE with a Java program named `Char.java`. The program counts the number of vowels, consonants, and special characters in a given sentence. The input sentence is `"#@!Hi, My name is Vignesh M N"`. The output shows the counts: Special Character Count: 4, Vowel Count: 6, Consonant Count: 13, Upper Case Count: 5, and Lower Case Count: 14.

```
1 public class Char {
2     public static void main(String[] args) {
3         String str = "@!Hi, My name is Vignesh M N";
4         String sample = str.replace(target: " ", replacement: "");
5         int SplCharCount = 0;
6         int VowelCount = 0;
7         int ConsonantCount = 0;
8         int UpperCaseCount = 0;
9         int LowerCaseCount = 0;
10
11         for(int i = 0; i < sample.length(); i++){
12             char ch = sample.charAt(i);
13             if(!((ch >= 'A' && ch <= 'Z') ||
14                 (ch >= 'a' && ch <= 'z') ||
15                 (ch >= '0' && ch <= '9') ||
16                 (ch == ' '))){
17                 SplCharCount++;
18             }
19             else if((ch == 'a' || ch == 'e' || ch == 'i' || ch == 'o' || ch == 'u') ||
20                    (ch == 'A' || ch == 'E' || ch == 'I' || ch == 'O' || ch == 'U')){
21                 VowelCount++;
22             }
23             else{
24                 ConsonantCount++;
25             }
26         }
27     }
28 }
```

Output:

```
PS D:\practice\final\practice\anudip> java Char.java
Sample Sentence : #@!Hi,MynameisVigneshMN
Special Character Count : 4
Vowel Count : 6
Consonant Count : 13
Upper Case Count : 5
Lower Case Count : 14
PS D:\practice\final\practice\anudip>
```

The screenshot shows an IDE with a project named 'practice'. The main editor displays a Java file named 'Char.java' with the following code:

```

1 public class Char {
2     public static void main(String[] args) {
3         // ...
4         VowelCount++;
5     }
6     else{
7         ConsonantCount++;
8     }
9     if(ch >= 'A' && ch <= 'Z'){
10        UpperCaseCount++;
11    }
12    if(ch >= 'a' && ch <= 'z'){
13        LowerCaseCount++;
14    }
15 }
16 System.out.println("Sample Sentence : " +sample);
17 System.out.println("Special Character Count : " +SplCharCount);
18 System.out.println("Vowel Count : " +VowelCount);
19 System.out.println("Consonant Count : " +ConsonantCount);
20 System.out.println("Upper Case Count : " +UpperCaseCount);
21 System.out.println("Lower Case Count : " +LowerCaseCount);
22 }
23 }

```

The terminal output shows the results of running the program:

```

PS D:\practice\src\main\java> javac Char.java
PS D:\practice\src\main\java> java Char
Sample Sentence : @!HI,MynameisVigneshWN
Special Character Count : 4
Vowel Count : 6
Consonant Count : 13
Upper Case Count : 5
Lower Case Count : 14

```

Question 2:

Write a Java program to reverse the String.

Input: "Anudip Foundation"

Output: "noitadnuoF pidunA"

The screenshot shows an IDE with a project named 'practice'. The main editor displays a Java file named 'AnuReverse.java' with the following code:

```

1 public class AnuReverse {
2     public static void main(String[] args) {
3         String Str = "Anudip Foundation";
4         String Result = " ";
5         for(int i = Str.length() - 1; i >= 0 ; i-- ){
6             char ch = Str.charAt(i);
7             Result = Result + ch ;
8         }
9         System.out.println("Original String : " +Str);
10        System.out.println("Reversed String : "+Result);
11    }
12 }

```

The terminal output shows the results of running the program:

```

PS D:\practice\src\main\java> javac AnuReverse.java
PS D:\practice\src\main\java> java AnuReverse
Original String : Anudip Foundation
Reversed String : noitadnuoF pidunA

```
